ABA-LPHSC-5 Lid Placer

Model M510

<https://youtu.be/A3vhaY4SIF4>

Our chute based 5 gallon plastic lid placer is designed to self center lids on the containers as they pass below the chute. This feature makes the machine more forgiving during setup and results in a more reliable placement.

- The ABA-LPHCS-5 five gallon plastic lid placer can be fully integrated with the ABA-PRESS-5NA five-gallon roller lid press and powered conveyor.
- Automatic chute replenishment allows the machine to keep the dropper chute constantly charged ready for the next container.
- The 4 foot long lid hopper holds between 35-64 plastic lids (avg. 50).
- Adjustable release paddles ensures that the unit will work with almost any shaped container.
