ABA-PLCR-CHUTE

ABA's ABA-PLCR-CHUTE is a semi-automatic, chute based lid placer. The semi-automatic design is the perfect middle ground between a fully automatic lid placer and having an operator manually place each lid by hand. This design allows an operator to pre-load lids in the chute, freeing him or her up to tend to other machine components before it is necessary to replenish the chute.

Features:

- Adjustable escapements ensure that the unit will work with round, square and rectangular lids.
- Works for both plastic and metal lids
